CONTENTS

What’s inside

1. Logging in 3
2. Today: your day at a glance 4
3. Adding students 5
4. A student’s profile 6
5. Level access: what a student can open 7
6. After each lesson: the debrief 8
7. The generated week plan 9
8. Reviewing homework 10
9. Homework from your own material 11
10. Analytics and reports 12
11. Tenses, grammar drills and word packs 13
12. Calendar and lessons 14
13. Invoices 15
14. Housekeeping and tips 16

1 Logging in

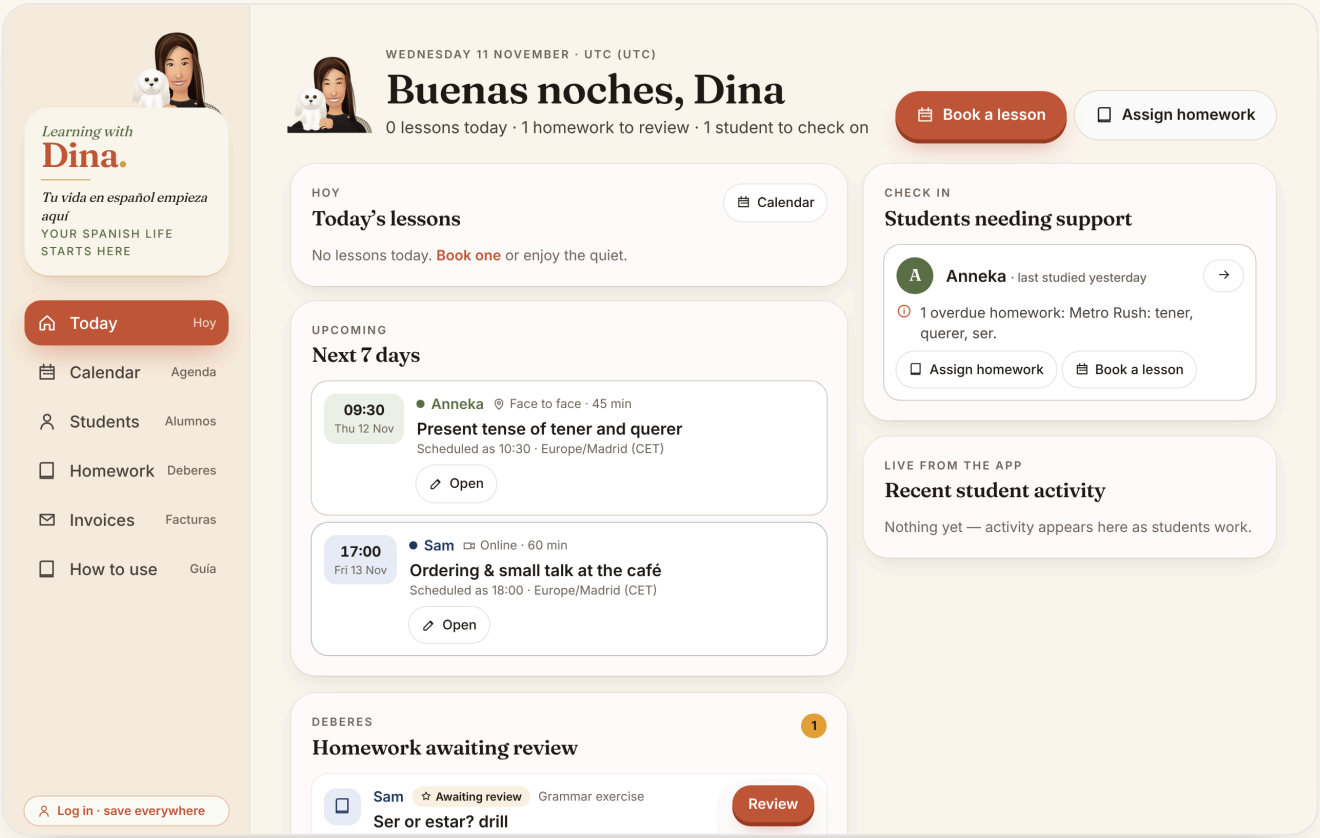

Everything you do as the teacher happens in the same app your students use. Your account is the one with the username **dina**; it unlocks the teacher dashboards on any device you log in on.

1. Open **scliffe93.github.io/Espanolwithdina**. The front page is *Lessons with Dina*.
2. Tap **Log in**, enter your username and password, and keep *Remember me* ticked on your own devices.
3. You land on **Today**. The menu has Today, Calendar, Students, Homework, Account and How to use.

Keep your recovery code safe. There is no email reset. If you forget your password, the recovery code is the only way back in. You can also be reset by the administrator.

2 Today: your day at a glance

Today shows your lessons for the day, homework waiting for your review, students who need support, and recent activity across everyone.

Today, with upcoming lessons, homework to review and student flags.

- ✓ **Needs support** flags appear when a student hasn't studied for five days, their accuracy drops below 60%, or they struggle to remember what they learned.
- ✓ Tap any student to open their profile; tap a homework item to review it straight away.

3 Adding students

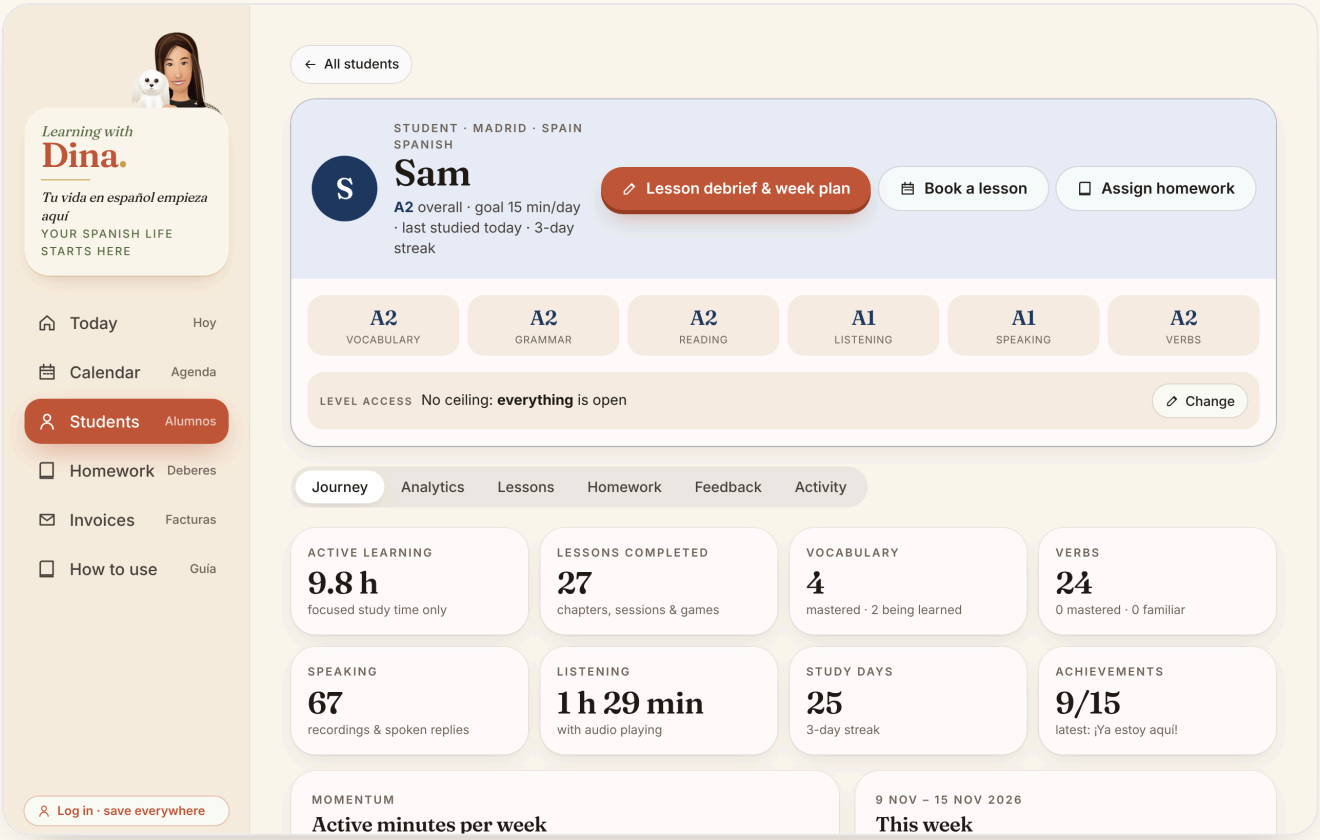

You are the one teacher, so every account is automatically your student. Add them yourself or let them register.

1. Go to **Students** and tap **Add a student**.
2. Enter their first name and a username. Leave the password empty to generate a simple temporary one.
3. The login details and recovery code are shown **once**. Copy them and pass them on privately. The student can change the password later in their settings.

Students who create their own account on the front page appear in your list automatically. There is nothing to link.

4 A student's profile

Open any student to see their **Journey** (levels, verbs, vocabulary, storylines), **Analytics**, **Lessons**, **Homework**, **Feedback** and **Activity**. The buttons at the top are your main actions.

The profile header with Lesson debrief & week plan, Book a lesson and Assign homework.

- **Lesson debrief & week plan**: the main way to set the week's work (next pages).
- **Book a lesson**: date, time, duration, online or face to face. Clashes with other lessons are refused. Students see the time in their own time zone.
- **Assign homework**: a single task when you need one outside the plan.

5 Level access: what a student can open

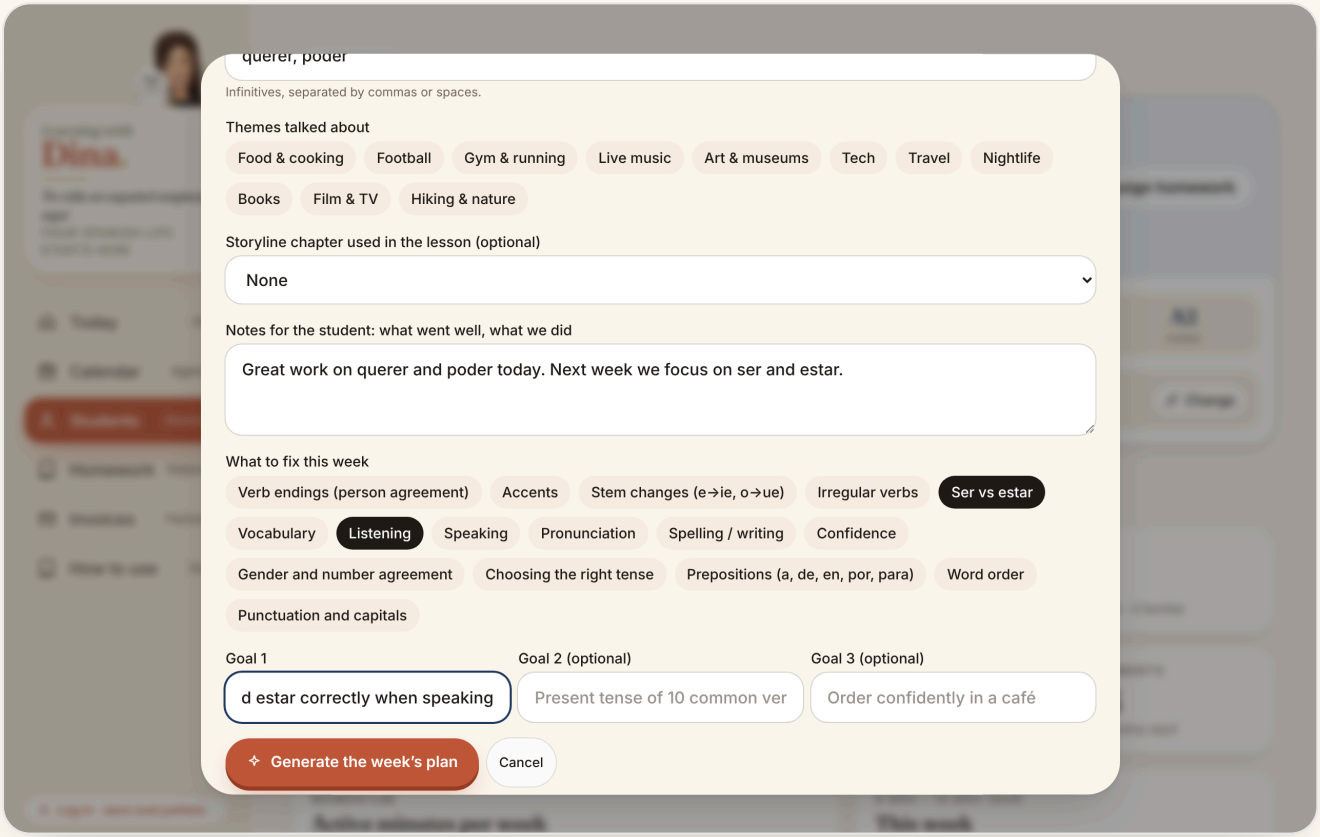

On a student's profile, **Level access** sets the highest level of work they can open on their own, from A1 to C2, with an optional note ("GCSE in June: stay on A2 until then").

- In their app, tenses, grammar drills and word packs above the ceiling are locked, and they cannot choose a higher level for themselves.
- Homework you assign always opens, whatever the ceiling; the assignment form and the debrief tell you when a task sits above it.
- The app never adds a stretch task above the ceiling on its own.

6 After each lesson: the debrief

Spend two minutes after every lesson. The debrief is both the note your student reads and the brief the app uses to build their week.

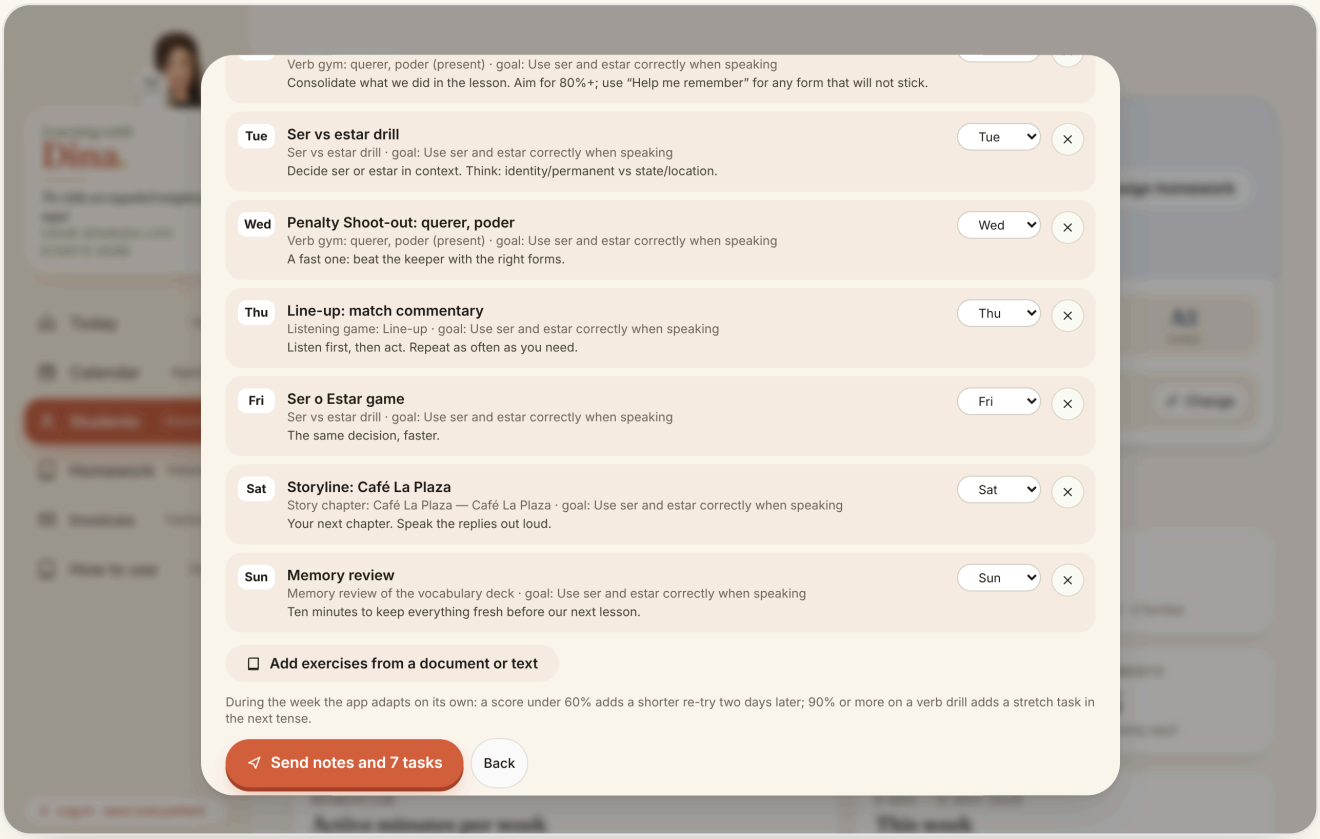

1. Open the student and tap **Lesson debrief & week plan**.
2. Tick the **tenses** and type the **verbs** you covered (the app suggests infinitives as you type), the **themes** you talked about and, if you used one, the **storyline chapter**.
3. Write a short **note for the student**: what went well, what you did.
4. Tick **what to fix this week**: verb endings, accents, stem changes, irregular verbs, ser vs estar, vocabulary, listening, speaking, pronunciation, spelling, confidence.
5. Add up to three **goals** and the **minutes a day** to aim for, then tap **Generate the week's plan**.

The debrief form: what you covered, your note, what to fix, goals and minutes a day. Above it (scrolled off here) sits last week's plan: done, on time, average score, recurring slips.

7 The generated week plan

The plan is built from your notes *and* the student's own data: the verbs they actually get wrong, their next storyline chapter, their interests (football fans get the football games). Every task is a real activity in the app.

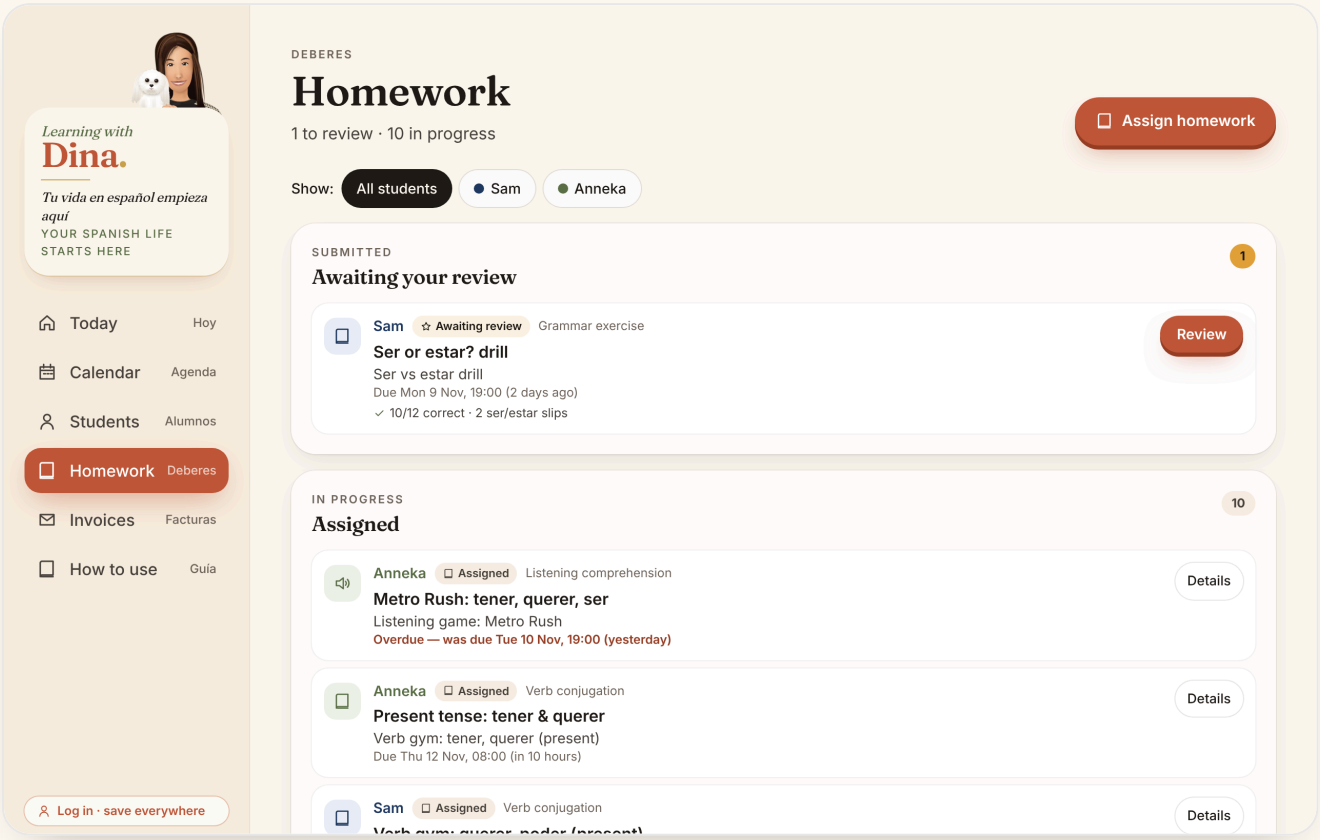

Review the plan: move a task to another day or remove it, then send notes and tasks together.

- ✓ Tasks are spread Monday to Sunday and due at 8 pm, never earlier than tomorrow evening.
- ✓ The student sees your note, the goals and the day-by-day tasks on their home page, with reminders in the app as each is due.
- ✓ Your next debrief opens with the evidence: done, on time, average score, recurring slips.

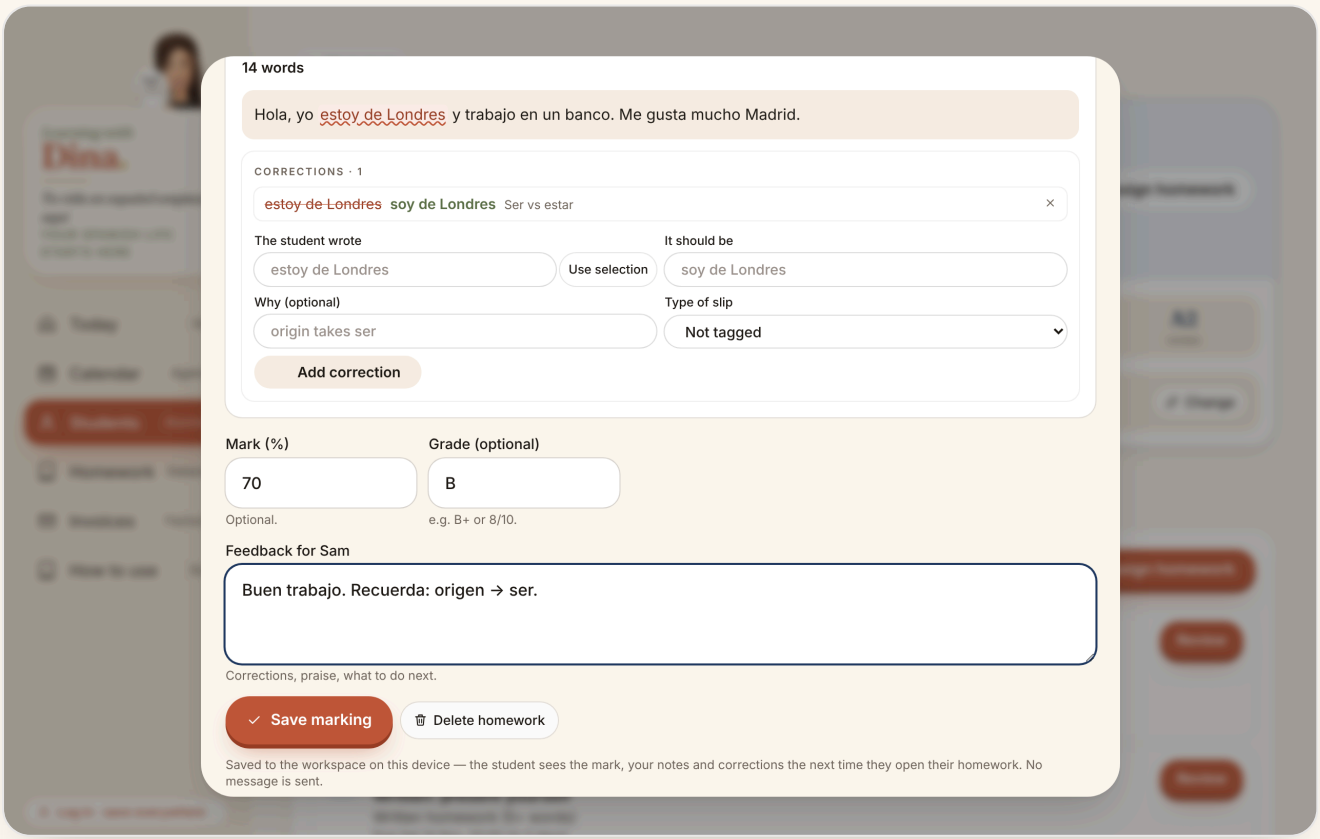

The app adapts on its own during the week. Under 60% on a task adds a shorter re-try two days later. 90% or more on a verb drill adds a stretch task in the next tense. Spaced repetition keeps bringing back whatever the student forgets.

8 Reviewing homework

Everything students submit appears under **Homework**, grouped by status. Games and drills score themselves; written and speaking homework show you the text or the recording.

The Homework page: awaiting review, assigned, reviewed.

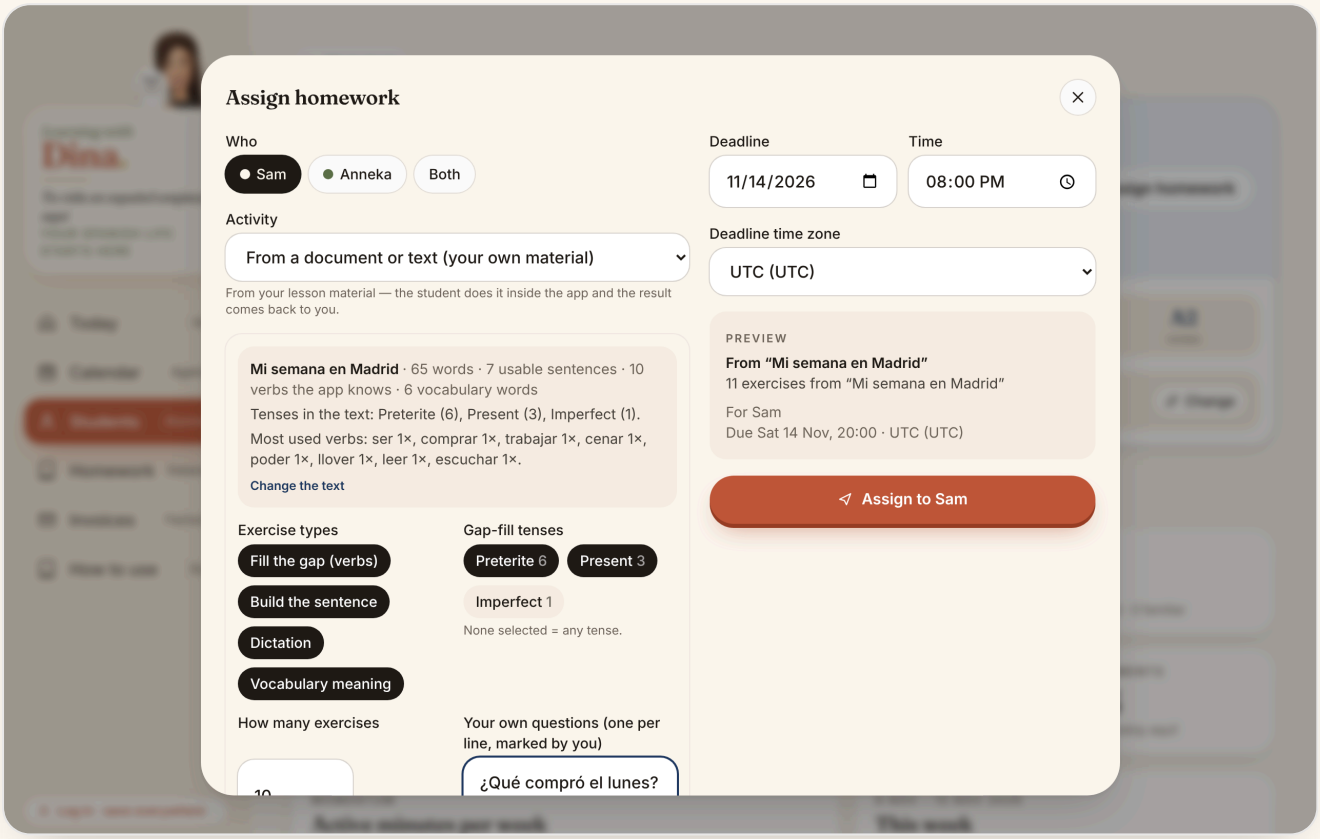

The marking sheet: the student's answers one by one, a mark or grade, and corrections quoted from their own words.

1. Open a submitted item. You see the score, attempts and a short summary, plus the written answer or the player for a recording.
2. Go through the answers one by one (accept one the app rejected, or leave a note on it), give a mark or a grade, and for written or spoken work add corrections: quote the student's words, say what they should be and tag the type of slip. Then write your feedback and tap **Save marking**. The student sees the mark, the corrections over their own words and your notes on their home page and Feedback page, and the tagged slips pre-fill *what to fix* in your next debrief.
3. Outside homework, use the **Feedback** tab on a profile for comments, corrections and recommendations.

9 Homework from your own material

Choose **From a document or text** when assigning homework, or **Add exercises from a document or text** in the plan step of a debrief. Drop in a PDF, a Word file or a text file, or paste a page from your course book.

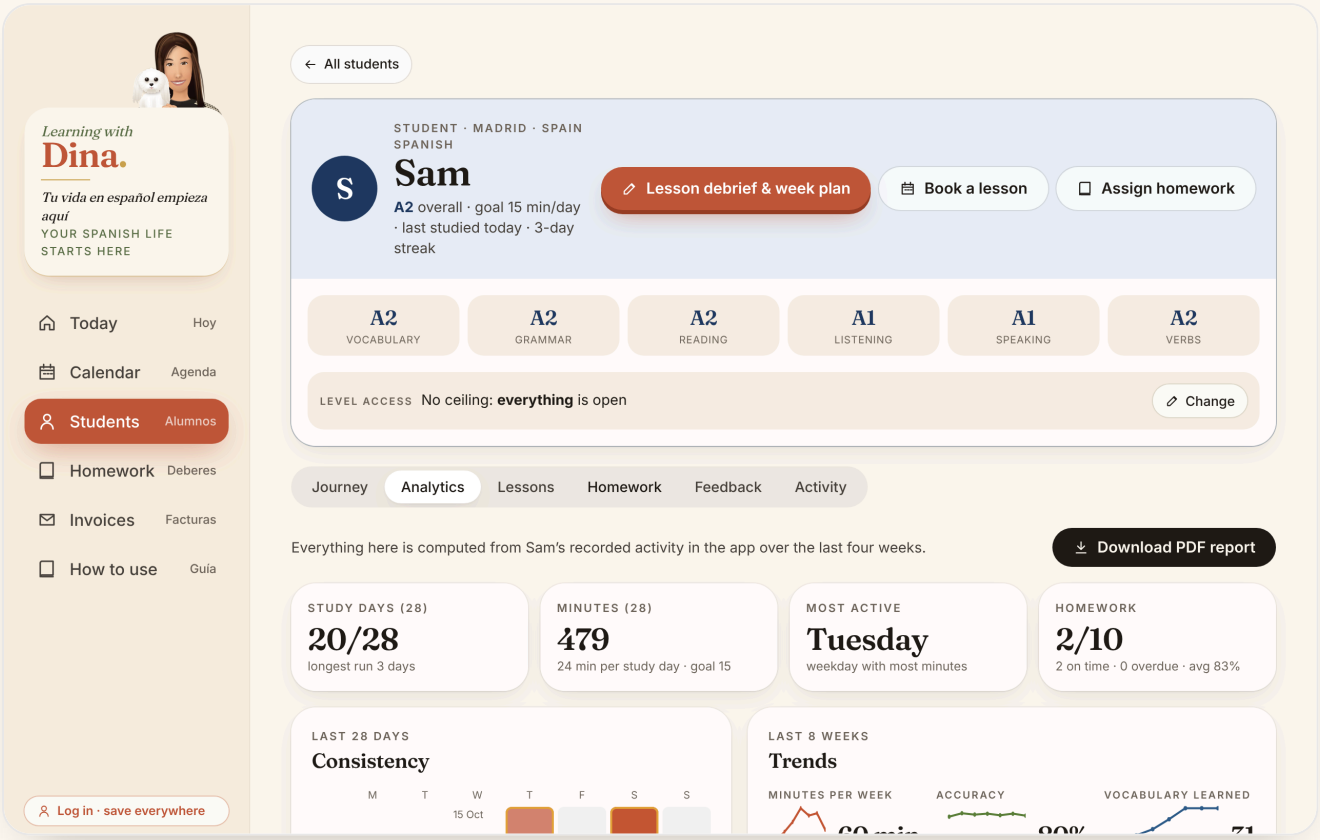

The builder reads the text in your browser, shows the verbs and tenses it found, and builds exercises from the document's own sentences.

1. Tap **Read the text and build exercises**. You see the words, the usable sentences, the verbs and tenses the app recognised and the vocabulary it knows.
2. Pick the exercise types (gap-fills on the verbs, sentence building, dictation, vocabulary meaning), the tenses to target, how many exercises, and add your own questions, one per line.
3. Check the preview, **Regenerate** for a different set, then assign. Nothing is uploaded anywhere.

Your questions are marked by you. Everything else scores itself; every answer, including the open questions, appears on the marking sheet.

10 Analytics and reports

The **Analytics** tab on each profile is computed from the student's recorded activity: nothing is estimated.

Consistency heatmap, eight-week trends, accuracy by exercise type, mistakes with real examples, tenses, vocabulary deck, homework and the generated focus for your next lesson.

- ✔ **Download PDF report** on the Analytics tab gives you a printable report for one student.
- ✔ **Class summary (CSV)** on the Students page opens in Excel or Numbers: one row per student.

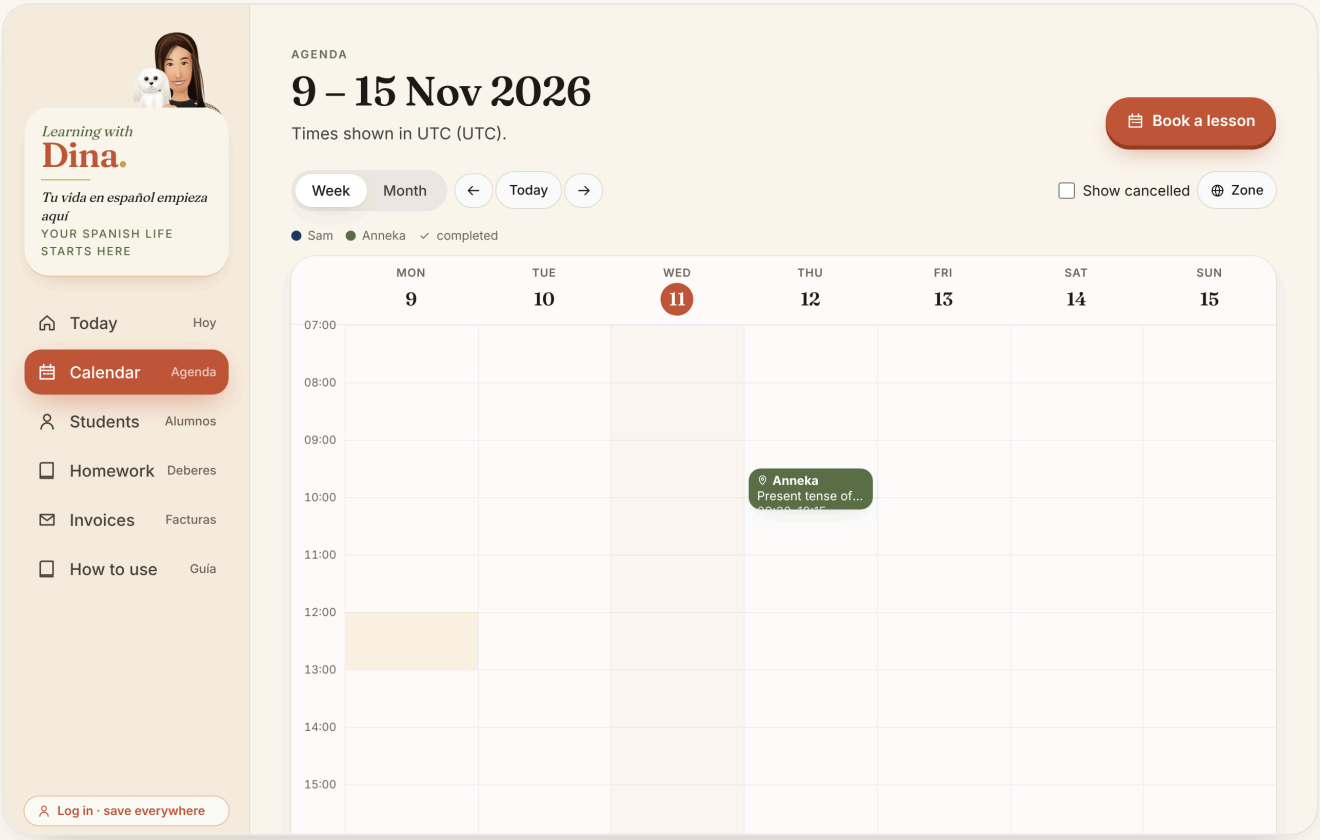

11 Tenses, grammar drills and word packs

The verb gym drills ten tenses: present, present progressive, present perfect, preterite, imperfect, commands, future, conditional, present subjunctive and imperfect subjunctive, across 376 verbs from A1 to C2, each tense recommended from a level.

- **Grammar drills**: ser vs estar (A1), por vs para (A2), preterite vs imperfect (B1), subjunctive or indicative (B1) and if-sentences (B2). Assign one from the homework templates, or let the debrief add one when you tick *prepositions* or *tense choice*.
- **Word packs**: fifteen packs of ten words from A1 (at home, food) to C2 (proverbs, literary register). Assign a pack as homework and it opens straight into its words; the week plan adds one at the student's level when vocabulary needs work.
- The placement assessment goes up to C2.

12 Calendar and lessons

The **Calendar** shows the week or the month. Book, move or cancel lessons here or from a student's profile.

Week view. Lessons show in your time zone; students see them in theirs.

- ✓ Online lessons can carry a meeting link; face-to-face lessons an address. Both appear on the student's next-lesson card.
- ✓ Reminders 24 hours and 1 hour before appear inside the app while it is open.

13 Invoices

Bill the lessons you have taught without leaving the app. Students see their invoices in their own app, with how to pay, and can download the PDF.

1. Once: **Invoices → Rates & payment details**. Your business name, currency, rate for a 60-minute lesson (other lengths are priced in proportion), days until due, invoice prefix, and **how students pay** (bank details or a payment link). This prints on every invoice.
2. **New invoice**: choose the student. The lessons you have taught and not yet billed are listed; tick the ones to include. Add any other line (a workbook, a lesson pack, a discount as a negative price).
3. **Save and send to student**: it appears in their app at once. Use **Email** to send the summary by email too, or **PDF** to download it.
4. When the money arrives, **Mark paid** with the date and method. Overdue invoices are flagged on your Today page and on the student's home page.

Invoice numbers run LWD-2026-0001, 0002… and are never reused. A sent invoice can be voided, never deleted; drafts can be deleted.

Lesson packages

Sell lessons in blocks and let the app count them. In **Rates & payment details → Lesson packages** define each package: name, number of lessons, minutes per lesson, price, and how many months it stays valid.

1. **Sell a package** (Invoices page, or the Lessons tab of a student's profile): choose the student and the package, the purchase date, and tick "already paid" if the money is in. The invoice is created for you.
2. From the purchase date, every lesson you teach that student uses one credit. Lessons you bill one by one are never counted.
3. The balance ("3 of 10 left · 2 booked") shows on the Students page, on the profile and on the student's own home page. When it is down to one lesson, Today flags it so you can offer the next package.

14 Housekeeping and tips

Change your password

Account → change password. Also where you log out or switch to another account on a shared device.

Reset a student's password

Ask the administrator (Admin → Accounts → Reset password). A new temporary password and recovery code are shown once.

Phone or tablet

Open the site in the browser and add it to the home screen. It installs like an app and works offline for learning content.

How to use, in the app

The menu has this guide and the student guide at any time.

A good weekly rhythm

1. Before a lesson: open the profile, glance at Analytics and last week's plan.
2. After the lesson: debrief, generate, adjust, send. Two minutes.
3. Midweek: Today shows who is behind; a quick comment helps.
4. Before the next lesson: review submitted homework so the feedback lands while it is fresh.
